

RE: Presence of Antimony

Dear Customer:

Inline Plastics Corp's. primary sheet suppliers have notified us that they do not intentionally add or use Antimony in their manufacturing process. However, Antimony may be used as a catalyst in the polymerization process performed by PET resin manufacturers. Our primary sheet suppliers have informed Inline Plastics Corp. that any migration levels are below limits established by either the World Health Organization or requirements under Proposition 65.

Here is a web site that may help explain this situation a little more in detail:
